Why does the progress bar not show 100% even after completing all the activities in an assignment?

08/14/2025 1:55 pm EDT

The progress bar depends on the **types of activities** included in the assignment.

Some activities are designed solely for practice purposes and do not generate a score.

For this reason, even if the student has completed all the activities, the progress bar may not show 100% completion.

These non-scored activities will eventually be locked so they do not interfere with the formal evaluation of an assignment.

> **Suggestion:** Check that the activities within the assignment are gradable if you want them to contribute to the total progress.
