In this section, all the elements that the teacher makes available to students to support the learning process are gathered. These resources include:

- Reading files: content materials.
- Audiovisual materials: videos / audios.
- Writing assignments: practical activities that reinforce the content covered in class.

Each student can:

- Review available activities: view the activities assigned by the teacher.
- Complete activities: submit their answers directly through the platform.
- Check progress and scores: verify their progress status and the grades obtained for each activity.

How do I view the activities?

- When entering the class, the <Class Materials> section is displayed.
- In this initial view, a preview of the activity appears, meaning a reduced version where only part of the content is shown.
- The purpose of the preview is to give the student a quick idea of what the activity is about before opening it completely.

The activity preview:

- Shows a portion of the activity before starting it.
- Indicates the progress status of the activity.
- From this view, the student can decide whether to open the activity in full screen or continue with another activity.

Expanding the activity

1. Click on the expansion arrows.

Expand to the left	Expand upward
	

2. The activity will open in full screen, displaying all the content and instructions.

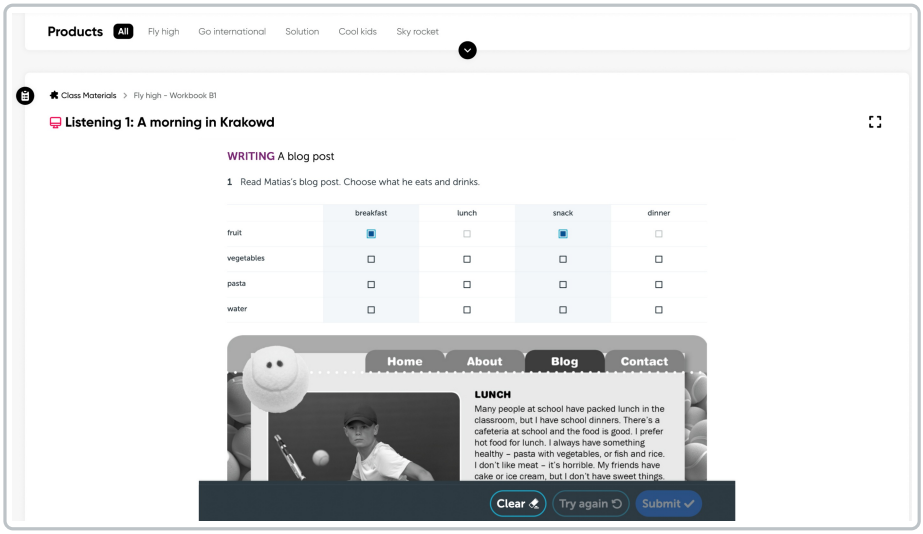

How do I start an activity?

- View the activity preview: only a portion of the content is displayed.
- Click <Start>.
- Click the expansion arrows to open the full activity.
- Use the menu icon to return to the initial view.

- Toggle the expand/collapse icon to adjust the display.

The preview is useful for:

- Quickly reviewing which activity is available.
- Deciding whether to open it in full screen or continue with another task.
- Maintaining smooth navigation without needing to load all the content immediately.

Keep in mind:

- Use the full-screen view to focus on a single activity and avoid distractions.
